Logged Crossref discovery (11 October 2026)
Author-assembled full-text frame
Identification
Screening and eligibility
Included
Records identified: n = 180
(9 of 10 queries returned the first
20 relevance-ranked records)
Duplicate DOI rows
removed: n = 10
Distinct DOIs screened: 170
Independent works: 169
Excluded at title: n = 52
Already in the frame: n = 39
Lead records assessed: 79
Independent works: 78
Not selected: 74 records
73 independent works
(Supplementary Table S1)
CG as RL action space: n = 1
Earlier report of S018: n = 1
Supplied and read in full,
added to the frame: n = 3
(S102, S103, S104)
Not recorded and therefore not reported: whole-web hit counts, cross-source
duplicates and a global title-screening denominator across all sources.
The sample is targeted and critical, not an exhaustive census.
Reports assembled for
full-text assessment: n = 101
(100 study families)
Reports assessed in full
text: n = 104 (103 families;
1 linked erratum)
Adjacent surveys
excluded from method
coding: n = 4
Families retained: n = 99
(79 core, 8 supporting,
12 background)
Targeted search
(14 Oct 2026): +1 core
family (S105); +2 reports
of included families
Study families included: n = 100
80 core + 8 supporting families: 146 coded variants (Table A.1)
12 background families (context only)
